

Collaborators - Week 1

Refactoring Detection Project - Team Contribution Summary

Purpose

This document summarizes who worked on each part of the Week 1 project progress. It is meant to be uploaded to the project website as a clear record of team collaboration.

Week 1 Shared Work

- Everyone contributed to the weekly presentation slides and team progress update.
- Everyone reviewed the project direction and helped understand the main goals of the tool.
- Everyone learned GitHub basics, including repositories, branches, pull, push, and pull requests.
- Everyone worked on learning the system agents and how they fit into the full refactoring workflow.
- Everyone created a prototype idea before the team compared the options and selected one final direction.

Individual Contributions

Team Member	Main Contribution
Fintan	Worked on the agents part of the presentation and helped explain the agent system and project architecture. Also contributed to the general slides and team discussions.
Juliana	Worked on the agents part of the presentation and helped create slides explaining the agent roles and multi-agent workflow in simple terms. Also contributed to the general presentation work.
Dhir	Created the prototype design that the team selected as the main direction. Also contributed to learning the agents and helped with the agents slides, while also creating an individual prototype like the rest of the team.
Jake	Created the GitHub slide and explained basic GitHub concepts such as repositories, version control, branches, pull requests, and team workflow. The whole team learned GitHub together, and Jake prepared the slide for this section.
Amaro	Focused on the design goals, target audience, and explaining who the tool is for. Also created the website to track project progress and prepared/worked on all the files included in the website.

Progress Areas Covered in the Slides

- Weekly progress summary: onboarding, documentation review, architecture, UI design, prototype selection, and GitHub familiarization.
- GitHub familiarization: repository management, version control, task division, peer review, and basic commands. The whole team learned GitHub together, and Jake prepared the slide for this part.
- Multi-agent system architecture: Detection Agent, Refactoring Agent, Usefulness Agent, Compilation Agent, and Testing Agent. The whole team worked on learning the agents, and Dhir and Juliana made the agent-related slides.

- Design and prototype development: target audience, requirements, prototype comparison, selected prototype, and next steps.
- Progress tracking: Amaro made the website to track progress and worked on/prepared all files included in the website.

Summary

Overall, Week 1 was focused on understanding the project, organizing the team workflow, learning GitHub, explaining the agent architecture, choosing a prototype direction for the user interface, and preparing website materials to track and present project progress.
