

Eighth Meeting Notes

Research meeting with Dr. AlOmar - Week 8

Meeting Focus

The eighth meeting focused on finalizing the CLONE UI work, reviewing progress on the Overleaf paper, and preparing the project for evaluation. The team showed the latest UI fixes, discussed the remaining final issues, reviewed new paper sections and screenshots, and planned how outside users would test the plugin and complete a feedback form.

- Presented the latest UI fixes and confirmed progress on the CLONE panel.
- Showed the progress completed on the Overleaf research paper.
- Reviewed the paper shared by Dr. AlOmar that may be used as a reference for the final paper.
- Discussed finding users to test the CLONE plugin with the new panel.
- Reviewed the feedback form that users will complete after testing the plugin.

Main Updates from the Meeting

Topic	Notes
UI fixes	The team showed the newest UI fixes and discussed the final remaining issues that still need to be completed and verified.
Overleaf progress	The team continued writing the final paper and expanded the new-feature documentation with additional detail.
Reference paper	Dr. AlOmar shared a paper that can help guide the structure, wording, and framing of the final research paper.
User testing	The team discussed recruiting users to test the CLONE plugin with the updated panel and provide feedback after using it.
Feedback form	Dr. AlOmar provided a form for testers. The team will edit the form so responses can be analyzed and converted into graphs for the final report.

Tasks for the Week

Area / Owner	Task
Team	Fix the final three remaining UI issues and confirm that the corrected panel works as expected.
Overleaf	Add more content to each subsection because the New Features sections are still brief.
Workflow section	Add a section explaining how the CLONE plugin works from clone detection through refactoring, validation, and user action.
How-to-use section	Add step-by-step installation, configuration, and usage instructions so readers can understand how to run the plugin.
Figures	Add images of each new feature in IntelliJ light mode and place each image in the matching subsection.
Each team member	Find two to three users to test the CLONE plugin and fill out the feedback form.
Feedback form	Edit the Google Form questions so the answers produce useful feedback and graphs for the final report.

Overleaf and Paper Direction

- Use the reference paper from Dr. AlOmar to improve the organization and level of detail in the final report.
- Expand the New Features subsections so each feature explains its purpose, design, implementation, and benefit to developers.
- Add the Workflow section to explain the full CLONE process in a clear order.
- Add the How to Use section so readers can understand how to install, configure, and test the plugin.
- Include clear figures in IntelliJ light mode for each individual feature and one image of the full UI panel.

User Testing Plan

The team will gather feedback from users who were not directly involved in development. Each member should recruit two to three participants, ask them to test the CLONE plugin with the new panel, and have them complete the updated Google Form. The responses will be reviewed by the team and converted into graphs or summary figures for the final paper.

Recommended Feedback Areas

Feedback Area	What the Team Should Learn
Clarity	Whether users understand what clone was found, where it is located, and what refactoring is being suggested.
Diff preview	Whether the before-and-after code comparison is easy to read and useful for making a decision.
AI Trust	Whether validation states and trust evidence make the suggestion easier to understand and assess.
Multiple clones	Whether separate clone occurrences and individual choices are clear when more than one clone is detected.
Actions	Whether Apply, Edit, Cancel, Inspect, Help, Include, and Exclude behave as users expect.
Overall usability	Whether the panel feels natural inside IntelliJ and whether users would feel comfortable using it during development.

Immediate Next Steps

- Complete and test the final three UI fixes.
- Expand every Overleaf subsection and add the Workflow and How-to-use sections.
- Capture light-mode images of each feature and the full UI panel.
- Revise the Google Form so it collects clear, measurable feedback.
- Each team member recruits two to three users to test the plugin.
- Organize user responses and create graphs for the final report.
- Continue updating the website and uploading all shared files.

Summary

Overall, the eighth meeting moved the project into its final refinement, documentation, and evaluation stage. The team presented the newest UI fixes, reviewed Overleaf progress, received a useful reference paper from Dr. AlOmar, and planned formal user testing. The next focus is to finish the remaining technical fixes, strengthen the final paper with detailed explanations and figures, collect user feedback, and keep the website and documentation organized.
