

Collaborators - Week 9

Refactoring Detection Project - Team Contribution Summary

Purpose

This document summarizes the Week 9 collaboration work for the CLONE / AntiCopyPaster refactoring detection project. The week focused on finalizing professional demo materials, completing documentation updates, polishing the IntelliJ UI panel, validating the plugin in IntelliJ 2026, preparing user-study results, and finishing the final paper and website deliverables.

Week 9 Progress Context

Area	Shared Progress
Demo Videos	The short professional demo reached its final version and was uploaded. The long demo was recorded in an initial version and continued through feedback, editing, and finalization.
Overleaf Paper	The team continued final paper edits, added more detail to sections, addressed advisor comments, prepared user-study results, and worked on referencing all figures and tables.
UI Fixes	The Help button/icon was reviewed and adjusted so it better matches IntelliJ expectations. Juliana and Dhir continued UI-panel fixes, with Juliana completing most of the remaining panel adjustments.
Tests and User Study	The team continued gathering feedback from users who tested the panel and planned graphs/results for the final paper. All members were expected to test the plugin in IntelliJ 2026.
Website and Files	Amaro kept the website and files updated, including work toward the main page, team information, resources, final report links, long video, UI screen capture, and README updates.

Shared Team Work

- Finalized and reviewed the short demo, while continuing to revise the longer demo based on feedback.
- Continued Overleaf work by adding final content, responding to comments, proofreading, and preparing references to every figure and table.
- Worked toward complete documentation, including screen captures in IntelliJ light mode and an updated GitHub README.
- Prepared user-study results by gathering tester feedback, organizing graph-ready data, and planning the experimental results section.
- Tested the CLONE plugin in IntelliJ 2026 so the team could verify that the final panel and workflow still function correctly.
- Kept website and OneDrive materials organized so final reports, videos, screenshots, and resources can be accessed in one place.

Individual Contributions

Team Member	Week 9 Contribution Summary
Amaro Da Luz	Continued the usual website, documentation, file organization, and final-deliverable support. Wrote the scripts for each version of the professional demo, updated the team website plan, worked on GitHub README improvements, prepared user instructions, and edited the demo recordings after Juliana recorded them. Also helped keep paper sections and final resources organized.
Juliana Pimentel	Recorded the demo versions from the prepared scripts and continued heavy work on UI-panel fixes. Juliana completed most of the remaining panel adjustments, helped verify the tool behavior, worked with Fin on button issues, and supported screen captures and light-mode images for the website and report.
Dhir Rana	Worked on UI-panel fixes with Juliana and supported final validation/AI Trust documentation. Continued contributing to the New Features section and helped ensure the validation-related UI behavior and explanation were represented clearly in the paper.
Fin Naughton	Worked on the complete workflow section for the paper, using the advisor-provided reference pages as guidance. Continued supporting developer-control/button behavior and worked with Juliana on remaining Apply/Edit/Cancel button issues.
Jake Stinton	Contributed to final paper writing and review, especially the introduction and usage-related explanation. Continued supporting the How to Use section and helped connect installation/configuration/testing steps to the final documentation.

Paper, Demo, and Documentation Assignments

For the next review, the team divided the remaining final-deliverable tasks across paper writing, demo production, UI validation, user-study reporting, website updates, and README/documentation work.

Section / Task	Owner(s)	Expected Work
Header and Abstract	Amaro Da Luz	Complete and polish the paper heading content and abstract so the paper clearly summarizes CLONE, the motivation, and the final workflow.
Introduction	Jake Stinton	Finalize the introduction explaining copy-paste duplication, maintenance risks, CLONE motivation, and why reviewable refactoring matters.
Problem Statement	Amaro Da Luz	Strengthen the problem explanation around duplicated Java code, AI-assisted suggestions, trust, validation, and developer control.
New Features	Dhir Rana + all members	Coordinate the New Features section. Each member should briefly explain their UI contribution and why it matters to the overall CLONE workflow.
Complete Workflow	Fin Naughton	Add the complete workflow to the paper, using the advisor-provided reference pages as guidance for the structure and explanation.
How to Use	Jake Stinton + Juliana Pimentel	Finalize the user-facing installation/configuration/use steps so testers and readers can understand how to run CLONE.
Demo Scripts	Amaro Da Luz	Write the narration scripts for the short demo and the long demo, using meaningful examples and professional wording.
Demo Recording	Juliana Pimentel	Record the demo versions using the prepared scripts and stable tool scenario.
Demo Editing	Amaro Da Luz	Edit the recorded demos, remove long processing waits, align narration with visible evidence, and prepare final versions for the website and submission.
Updated Build	Juliana Pimentel	Create an updated build of the plugin after the remaining fixes are completed and verified.
Website and README	Amaro Da Luz	Update the team website with main page, team info, resources, final report, videos, UI capture, and update the GitHub README.
Proofreading and Overleaf Comments	Everyone	Address advisor comments in Overleaf, add replies where needed, proofread the whole paper, and reference every figure/table with \ref{...}.

Verification and User Study Plan

- All team members will test the CLONE plugin with the 2026 version of IntelliJ to confirm the final behavior.
- User-study data will be finished, summarized, and converted into graphs for the experimental results section.
- The team will add screen captures in IntelliJ light mode, including full UI-panel images and individual feature screenshots.
- Documentation will include tester instructions, website resources, README updates, demo videos, and final paper materials.

Collaboration Summary

Week 9 was mainly a finalization and validation week. The team continued making paper edits, completing demo materials, gathering user-study results, and validating the CLONE tool in IntelliJ. Amaro and Juliana carried much of the final demo and UI-verification work, with Amaro writing and editing the demo materials and Juliana recording the demos and completing most remaining UI fixes. Dhir, Fin, and Jake continued supporting their assigned paper and UI sections so the final report, documentation, website, videos, and user-study results could come together as one complete deliverable set.
