

Ninth Meeting Notes

Research meeting with Dr. AlOmar - Week 9

Meeting Focus

The ninth meeting focused on final polish and final deliverable preparation. The team reviewed UI fixes, demo video progress, Overleaf edits, user testing results, website updates, GitHub README updates, and the final build/testing plan.

- Reviewed the Help icon issue: the bordered square looked like a button, so the panel should use IntelliJ's built-in Help icon with a simple tooltip.
- Confirmed the short professional demo was complete and that the long demo needed final feedback and polishing.
- Discussed final documentation, white/light-mode screenshots, website resources, README updates, and IntelliJ 2026 testing.
- Planned the remaining paper work: workflow section, user study results, Overleaf comments, proofreading, and figure/table references.

Main Updates from the Meeting

Topic	Notes
Demo videos	The short demo final version was completed and uploaded to OneDrive. The long demo was uploaded as a first version and is awaiting feedback.
UI fixes	The Help button size/design was corrected, with final guidance to use IntelliJ's built-in Help icon and a tooltip.
Overleaf paper	The team continued final edits, added content to the sections, updated light-mode images, and prepared to add user testing results.
Testing results	The team planned to finish collecting user feedback and convert the results into graphs for the final paper.
Website and files	The website and OneDrive files are up to date, with final resources still being added.

Tasks for the Week

Area / Owner	Task
UI Help icon	Replace the bordered custom help image with IntelliJ's built-in Help icon. Add a tooltip such as "Help" so it matches Light, Dark, and New UI themes.
Juliana / Amaro	Create the short and long professional demo videos using a meaningful Java example and send the videos with their scripts by Wednesday, July 15.
Everyone	Complete full documentation and add a white/light-mode screen capture.
Everyone	Test the plugin functionality with the 2026 version of IntelliJ.
Juliana	Create an updated build of the plugin.

Area / Owner	Task
Amaro	Update the team website with a main page, team information, resource page, final report, long video, and UI screen capture.
Amaro	Update the GitHub README and send instructions for users who will test the plugin.
Everyone	Report user study results, address Overleaf comments, add replies, proofread the whole paper, and reference all figures and tables using \ref{...}.
Fin	Add the complete workflow section in the paper using the reference paper pages 9 and 10 as guidance.

Demo and Documentation Direction

- The short demo should show an end-to-end flow: natural copy/paste duplication, detection, occurrence selection, explanation, diff, validation, Apply, changed source code, and passing verification.
- The long demo should add detail about Inspect, Help, Edit, Cancel, include/exclude, validation evidence, user testing context, and the full developer-control workflow.
- The website should become a final project hub with main page, team information, resource links, final report, demo videos, and UI captures.

Paper, Testing, and Results Plan

- Finish gathering user feedback from the people who tested the CLONE UI panel and add the results to the research paper.
- Create graphs from the user study data, including feature usefulness and overall experience results.
- Review and finish final Overleaf details, address advisor comments, add replies, update light-mode figures, and proofread the full paper.
- Reference every figure and table in the text using LaTeX references so the final paper is complete and consistent.
- Finalize the long demo and keep the short demo concise, readable, and evidence-based.

Next Steps

Area	Next Step
Testers	Finish gathering feedback from users who tested the panel and add the results to the research paper.
Overleaf	Finish final details, comments, proofreading, workflow writing, user study results, and updated images.
Demo videos	Finalize the long demo version and keep the short demo polished.
Build/testing	Create the updated build and confirm functionality in IntelliJ 2026.
Website / README	Add the final website resources and update README screenshots, naming, and documentation.

Meeting Summary

The ninth meeting moved the project into final polish. The short demo was completed, the long demo was in progress, Overleaf was being finalized, user testing data was being prepared for graphs, and the updated UI screenshots were being added in light mode. The remaining priorities are to correct the Help icon, test CLONE in IntelliJ 2026, create an updated build, finish the paper and documentation, update the website and README, and finalize the long demo.
