

← Waiting state was still [AntiCopyPaster]

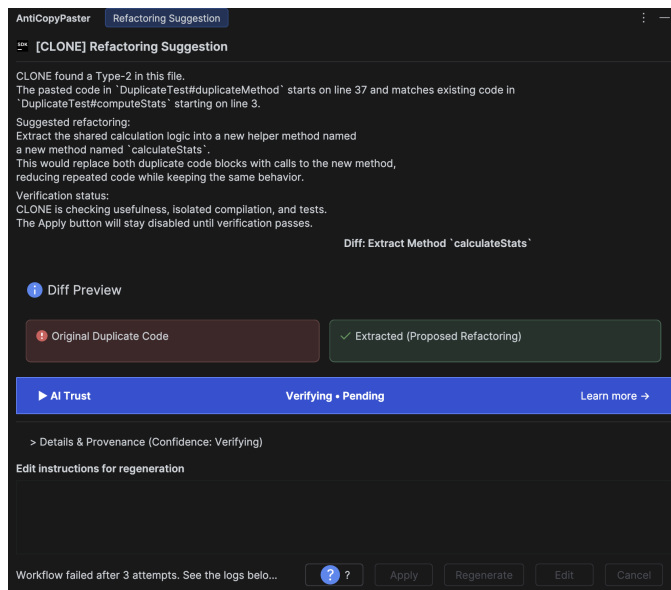

← Refactoring suggestion Panel taking a large amount of the panel space

← Diff Preview not visible

← Details & Provenance dropdown had a hardcoded string arrow instead of an IntelliJ Icon and displayed

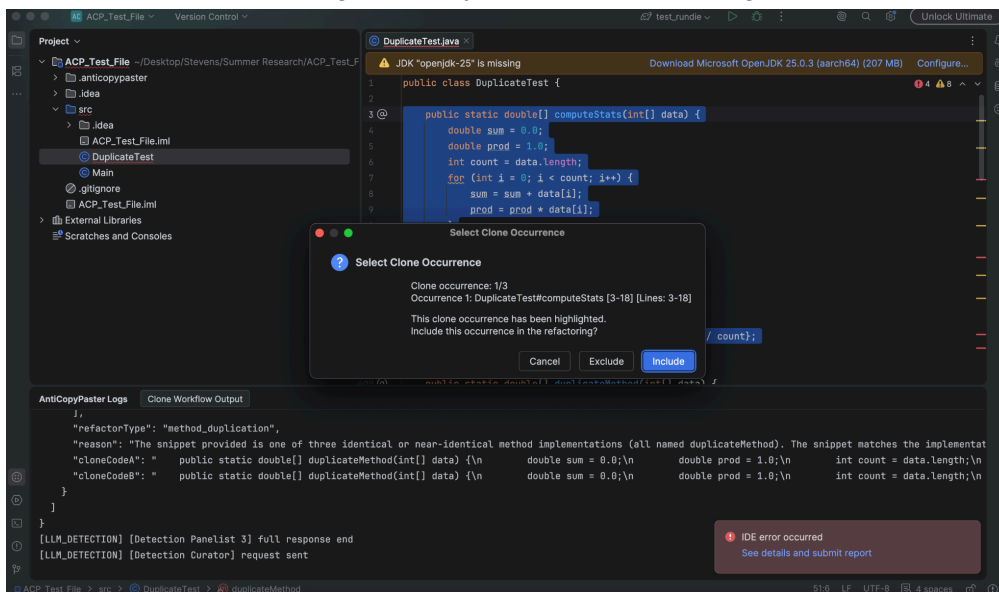

the confidence that Dhir's AITrustPanel was already Responsible for

^ "Workflow failed..." interrupted by action bar

← Diff Panel still not showing code even after folding AITrustPanel

V Clone occurrence Dialog text body shifted a bit to the right

Changes made

- a) Changed [AntiCopyPaster] to [CLONE] in function: showWaitingState (waiting state of the panel had not been altered)
- b) Removed extra “?” from help button in actionPanel
- c) Shifted text in function: CloneOccurrenceDialog, aligning it to its label to the west of the dialog
- d) Removed “Confidence: Pending” in the dropdown label since Dhir’s confidence section already takes care of that
- e) Wrapped suggestion panel in a JScrollPane, adding scrollbars to the tool window that permits the user to see all of the content without compromising space and visibility.
- f) Fixed createActionPanel layout bugs, which made the buttons stay to the right of the statusLabel. Buttons now remain below everything.
- g) Replaced string arrow (“v”, “>”) in "Details & Provenance" dropdown with an IntelliJ dropdown arrow Icon.
- h) Reduced top description spacing in order to make more space for the more user interactive features and provide an overall cleaner look to the panel.
