44 throw new IllegalArgumentException("Invalid email");
45 }
46 if (u.getPassword() == null || u.getPassword().length() < 8) {
47 throw new IllegalArgumentException("Password must be at least 8 chars");
48 }
49 ...
50 }
51
52 public boolean updateUser(User u) {
53 ...
54 if (u.getUsername() == null || u.getUsername().trim().isEmpty()) {
55 throw new IllegalArgumentException("Username is required");
56 }
57 if (u.getEmail() == null || !EMAIL_PATTERN.matcher(u.getEmail()).matches()) {
58 throw new IllegalArgumentException("Invalid email");
59 }
60 if (u.getPassword() == null || u.getPassword().length() < 8) {
61 throw new IllegalArgumentException("Password must be at least 8 chars");
62 }
63 ...
64 }
65 }

[AntiCopyPaster] Refactoring Suggestion

2 Explanation

AntiCopyPaster detected that the code you pasted is a Type-2 clone of the existing method in the same class.

Existing clone location: UserValidator.java:42-48

Pasted clone location: UserValidator.java:101-107

Suggested method name: validateInput(...)

The assistant suggests extracting the common validation logic into a new method and replacing the duplicate with a method call.

Behavior Preserved

1 Duplicate Removed

Rationale: The duplicated validation logic is structurally identical except for formatting/whitespace.
