

Sixth Meeting Notes

Research / team progress meeting - Week 6

Meeting Focus

The main goal of the sixth meeting was to continue moving the UI Panel implementation toward review and integration. The team discussed pull requests, code review responsibilities, full runIDE testing, website updates, and the next step of starting the Overleaf paper work.

- Team members should email Dr. AlOmar whenever they will miss a meeting.
- Overleaf work is planned to start next week.
- Each member should create a pull request so their branch changes can be reviewed before integration.
- Reviewers should be assigned for each team member's branch.
- Branches should be integrated only after they have been reviewed successfully.
- The full UI Panel must be tested with the ZIP file installed using runIDE before the final version is pushed.

Main Updates from the Meeting

Topic	Notes
Attendance communication	Any team member who will miss a meeting should email Dr. AlOmar ahead of time so the team and supervisor are aware.
Overleaf	The team will begin working with Overleaf next week as the project starts moving toward paper/report preparation.
Pull requests	Each member should open a pull request for their branch so the changes can be reviewed before being merged into the ui_panel branch.
Code review	A reviewer should be assigned for each branch. The reviewer checks the code, asks for fixes if needed, and confirms when it is ready to merge.
Integration	Reviewed and accepted branches should be integrated into the shared ui_panel branch. Dr. AlOmar will review the final UI Panel after the team integration is complete.
Full panel testing	The team must run the full panel with the ZIP file installed through runIDE to make sure the integrated UI works in the IntelliJ sandbox.
Website progress	Team members should send Amaro their Week 5 progress so he can finish updating the website files.

Tasks for the Week

Owner / Area	Task
All members	Create a pull request for each feature branch so the changes can be reviewed before merging.
Team	Assign a reviewer for each member's branch and complete the review process.
Team	Integrate branches once the pull requests have been reviewed successfully.
Team	Run the full UI Panel with the ZIP file installed using runIDE to verify the complete integrated panel.
Team / Dr. AlOmar	After the team finishes integration into ui_panel, Dr. AlOmar will review the final UI Panel.
All members	Send Amaro Week 5 progress and collaboration notes so the website can be updated.
All members	Email Dr. AlOmar whenever a meeting will be missed.

Team Meeting Summary

During the team meeting, the team focused on testing code, checking which sections were ready, and dividing verification tasks before merging everyone's work together.

- The team tested code during the meeting.
- Amaro's explanation section and Fin's buttons section were verified.
- Verification tasks were divided so each section can be checked before merging.
- The team will merge everything after each person's code has been checked.
- The team is waiting for Juliana and Jake to push their code and create pull requests.
- Members who have not already done so should send Amaro their Week 4 and Week 5 work summaries so the website can be updated.

Pull Request and Review Plan

The team will use the branch and pull request workflow to make sure the final UI Panel is reviewed before it becomes part of the shared ui_panel branch.

Step	Action
1. Finish branch work	Each member finishes and tests their assigned UI section on their own branch.
2. Push branch	Each member pushes their branch to GitHub.
3. Open pull request	Each member opens a pull request into the ui_panel branch.
4. Assign reviewer	A reviewer is assigned for each pull request so the code can be checked.
5. Fix issues	If the reviewer finds problems or conflicts, the branch owner fixes them.
6. Merge	Once the pull request is accepted, the branch is merged into ui_panel.
7. Final review	After integration is complete, Dr. AlOmar reviews the final UI Panel.

Immediate Next Steps

- Juliana and Jake should push their code and create pull requests when ready.
- Assign reviewers for each team member's pull request.
- Complete review and verification tasks before merging into ui_panel.

- Run the full UI Panel through runIDE with the ZIP file installed.
- Send Week 4 and Week 5 collaboration updates to Amaro for the website.
- Prepare to begin Overleaf work next week.
- Email Dr. AlOmar in advance if a team member will miss a meeting.

Summary

Overall, the sixth meeting focused on verification, pull requests, and preparing the UI Panel for final integration. The team confirmed that some sections had already been tested, divided remaining verification tasks, and agreed that all branches should be reviewed before being merged into `ui_panel`. The next focus is to finish pull requests, review each branch, run the full panel with runIDE, update the website files, and prepare for Overleaf work next week.
